

Outer Seat Hinge Cover Repair

The driver's left side and the passenger right side hinge cover is often broken by the occupants sliding out of the car.

This repair requires drilling a 1/4" hole in the plastic cover in the center of where the broken clip post was. See photo:

Next, place a M6 long extruded U-nut, (S&S part #J5650PK) in the center of the existing hole.

Insert M6x40 bolt (S&S part#J65337) through hole and into threaded U-nut and tighten snugly.

A shot of flat black paint will finish it.
